Company**

Nine Mile Run was the largest urban natural stream design in the U.S. at the time of restoration. The goal of the project was to establish and restore 10,400 LF of stream to improve stream habitat for aquatic organisms, modify the stream to control storm water surges, reforest the flood plain, and create 10 acres of additional wetland areas.

Core Work Features

- Excavating and grading.
- Constructing vanes and step pools, spillways with live stakes, and plunge pools.
- Salvaging and placing woody and habitat structures.
- Installing brush layering for bank stabilization using soil wrap layers.
- Seeding and planting 20 acres of scrub, wetland, meadow, and woodland zones.
